

Vivendi

L-Hydro Pericardium Patch

Labcor Laboratórios is pleased to introduce an Advancement in patching procedure. Vivendi is a pericardium patch treated with the newest technology in tissue treatment, L-Hydro Technology

- ♦ Low Trombogenicity
- ♦ High Strength
- ♦ Excellent Flexibility
- ♦ Reduces Suture Hole Bleeding
- ♦ Low Transudation
- ♦ Low Calcification
- ♦ Non - Fraying
- ♦ Easy of Handling

L-Hydro

Technology

New Generation for grafts with non-aldehyde preservation

Vivendi is part of the new generation of Labcor products, preserved by the L-Hydro Technology. This New preservation process presents to the receiving organism a non-cellular matrix very similar to the natural. Moreover, it permits the cellular growth to occur in the condition under which the graft would exercise its functions.

L-Hydro Preservation Process

- ♦ Moderate extraction of antigenic substances;
- ♦ Non-extracted antigens are hidden by means of an activated polyglycolic agent;
- ♦ Moderate chemical process to promote the reduction of components that induce inflammatory responses on the receptor;
- ♦ Incorporation of a non-steroid anti-inflammatory agent;
- ♦ Incorporation of an anti-thrombosis agent;
- ♦ Chemical sterilization in hydrogen peroxide.
